1. Metal Service Centers Listed in Directory	117
--	-----

Foreword

This directory is a companion to the job shop directory issued in 1966 and revised in 1970 which proved to be one of the most sought after reports of the Industrial Development Division. Because this publication focuses on another aspect of the metal industry -- raw materials -- it provides valuable information to southeastern metalworking companies seeking new and additional sources of supply and to metal fabricators contemplating a move to the area.

As it is intended that this directory be periodically revised and expanded, any comments or suggestions for improving the publication will be welcome.

Ross W. Hammond, Chief
Industrial Development Division
GEORGIA INSTITUTE OF TECHNOLOGY

INTRODUCTION

This directory of metal service centers is designed to be a guide to metal distribution and warehousing facilities in Georgia and the five surrounding southeastern states. Its individual company listings itemize metals stocked by form and treatment. Through the detailed indexes in the back of the directory, distributors of a specific metal can be identified and companies in a given geographical area can be determined.

Each company listing begins with a tab showing its name, address, approximate warehouse space, and number of employees. Stocks are listed first by form and treatment and then by type of metal or plastic. Where many kinds of metals are distributed by one company, the more important metals stocked may be specified.

Following the forms and metals are listed metalworking in-plant processes for those companies which perform such services.

To find a specific kind of metal, use the metal and form index at the back of the directory. A guide to the index immediately precedes it. An alphabetical list of companies and their index numbers is given on pages 118 through 120.

To locate companies in a specific geographical area, use the alphabetical index by town. The map which follows it describes visually the distribution of metal service centers listed in the directory.

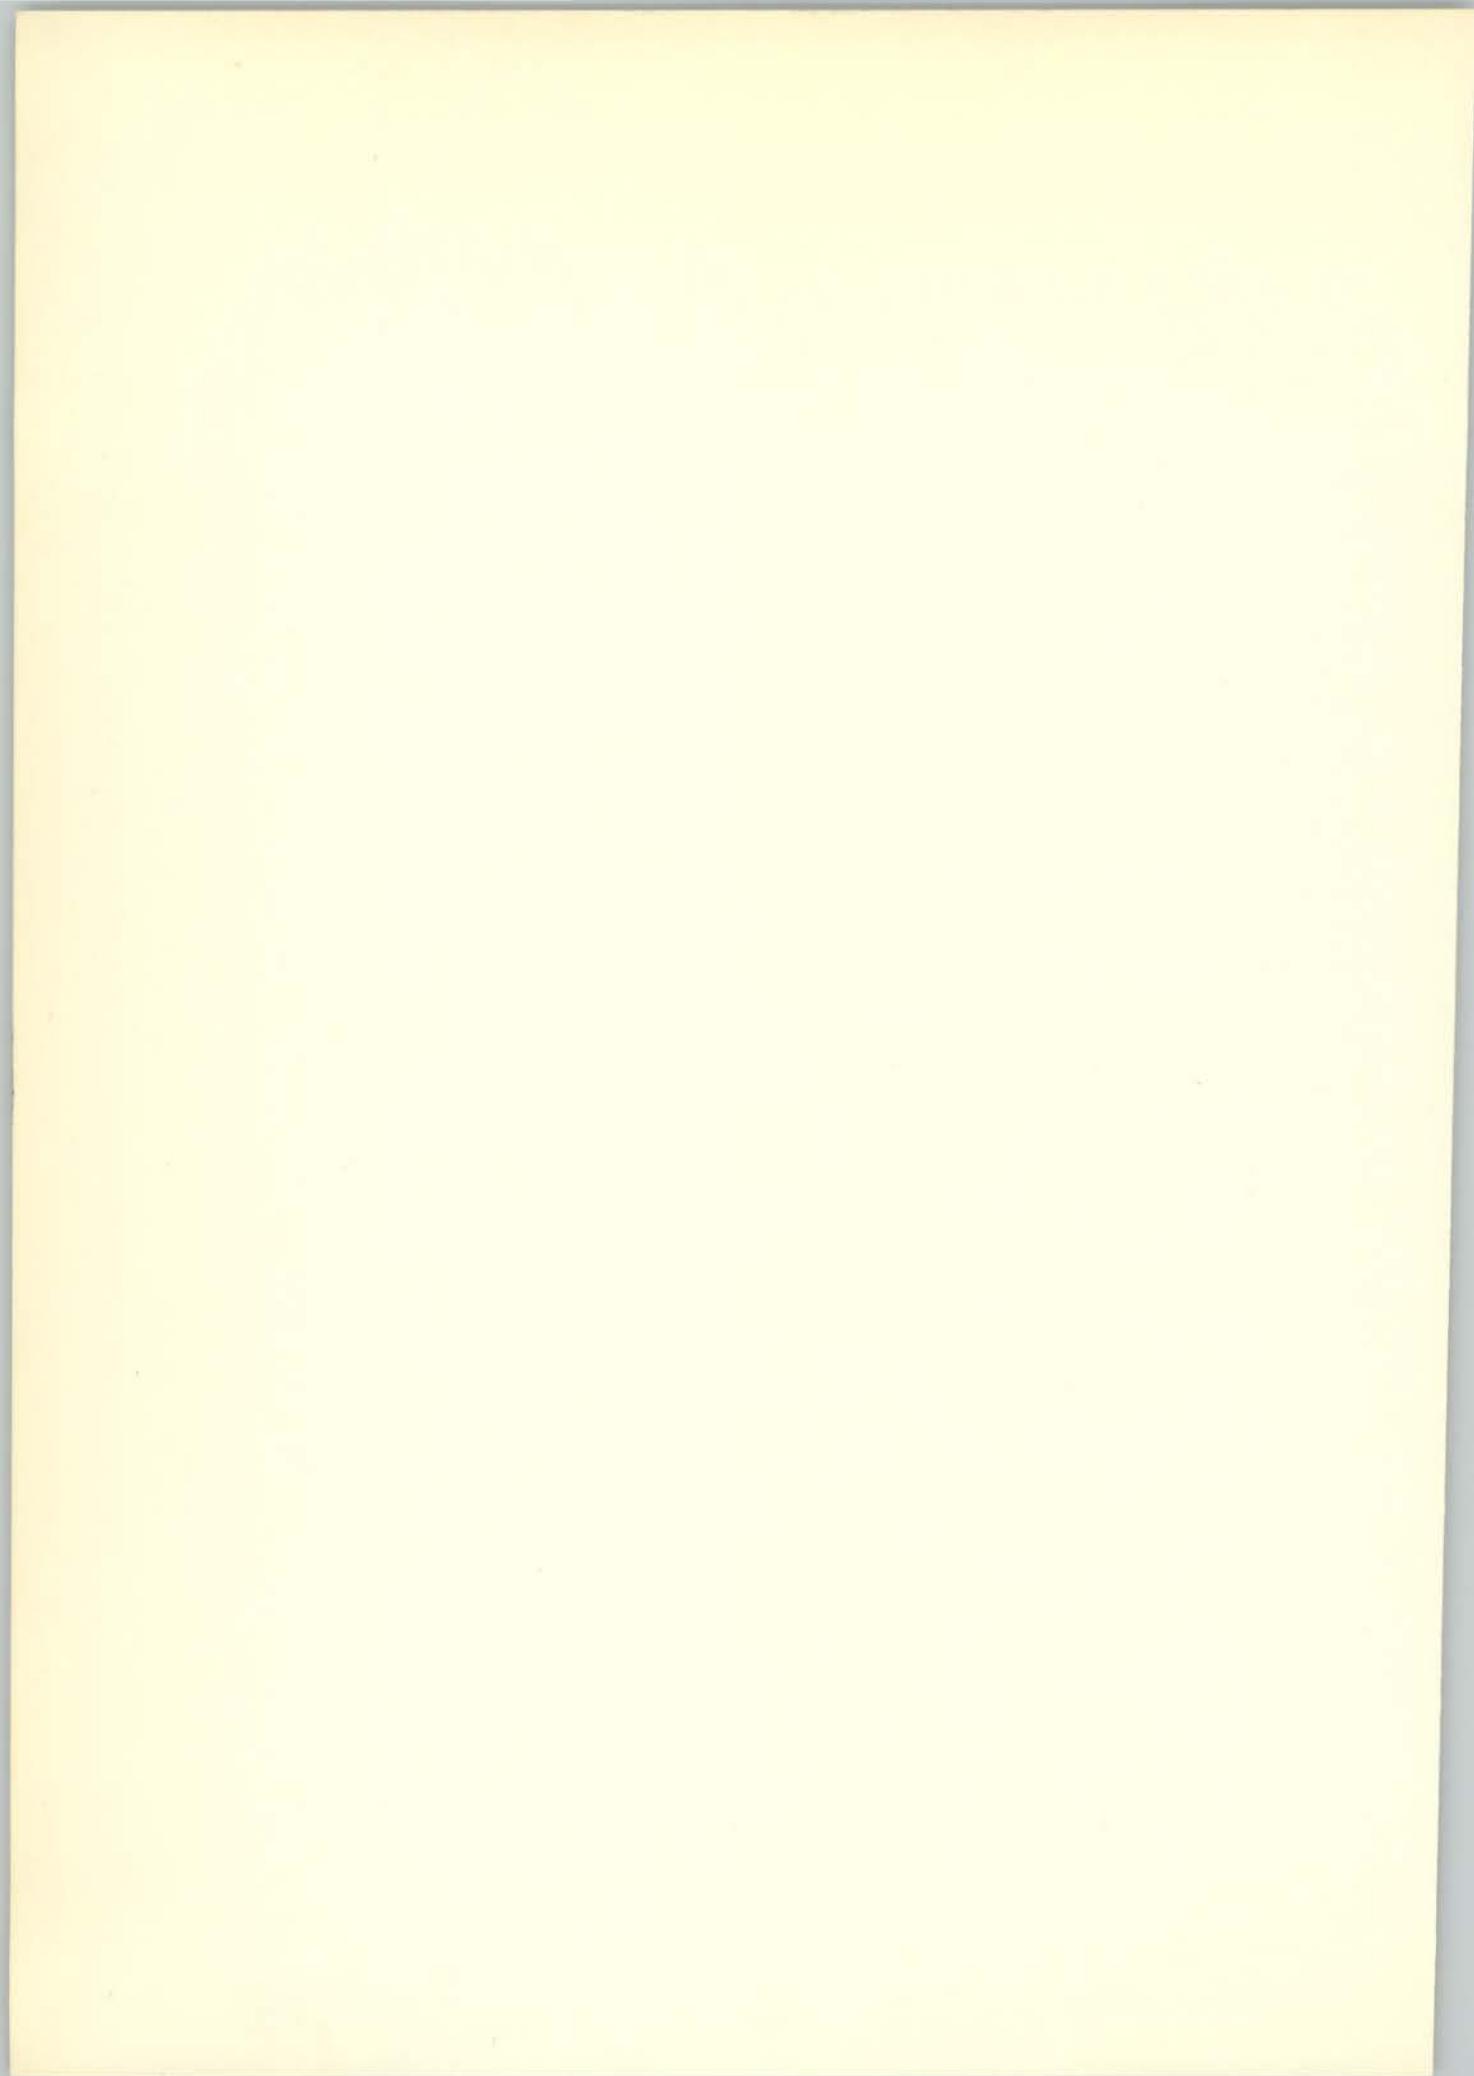

Information for this directory was collected through questionnaires and personal and telephone interviews. More than 200 metal distributing firms in the Southeast were solicited. The 115 questionnaires which were completed and returned were adapted to a standard format and are the basis for this directory.

This directory is a first edition and includes all of the firms in the Southeast which showed interest in being listed as metal service centers. Companies wishing to appear in future editions should request questionnaires from:

Metal Service Centers in the Southeast
Industrial Development Division
Georgia Institute of Technology
Atlanta, Georgia 30332

Distributors presently included in the directory should send information on additions or corrections to the same address.

GUIDE TO THE METAL AND FORM INDEX

The Metal and Form Index is sectioned alphabetically by type of metal stocked. Under each metal, also alphabetically, are listed all forms and treatments reported in the directory. Each classification is followed by the index numbers of the service centers handling these items. An alphabetical list of companies and their index numbers is given on pages 118 through 120.

Metals indexed are (in order) alloy steel, aluminum, brass, bronze, carbon steel, copper, high strength steel, stainless steel, tool steel, other metals, and plastics.

Forms indexed are as follows:

Bars, cold finished

hot rolled

reinforcing

Billets

Castings

Extrusions

Pipe-Tube, seamless

welded

Plates

Rods

Sheets-Strips-Coils, coated or treated

cold rolled

corrugated

galvanized

hot rolled

perforated or expanded
