

Prospective Students Apply by Computer

Amy Fraser Communications

A n increasing number of prospective students are turning to the World Wide Web (WWW) and other electronic vehicles to apply for enrollment to Georgia Tech. This year, 27 percent of Tech's fall applications were submitted using the Apply By Computer process (ABC), and 5 percent were submitted via the Internet.

The ABC process, a modem-based process developed in 1987, allows students to "dial up" Enrollment Services 24-hours a day. Once connected, prospective students follow a series of prompts to complete an electronic admissions application.

"The ABC process is a time saver for employees and students," said Barbara Hall, associate vice president of Marketing and Enrollment Services, "because the data the applicants enter is automatically saved in the main enrollment database."

Prospective applicants can access a similar electronic template using a new WWW interface created by Tech student Benjamin Hall. The WWW option was added in October 1995 to further enhance Georgia Tech's overall Internet presence.

"When we began researching the WWW option, we found other colleges with downloadable admissions applications," Benjamin said. "But, to the best of my knowledge, Tech was the first to take the final step by completely automating the process."

The website is tocated on the Internet at <http://www.gatech.edu/admissions/undergrad/index.html>. Not only is the quantity of applicants increasing—from 23 percent in 1995 to 32 percent in 1996—but, the quality may be as well. Based on a study of the '96 fall applicants, Ms. Hall determined distinct differences among those applying electronically and those using traditional methods. ABC applicants' average SAT scores were 85 points higher than paper-based applicants, and web-based applicants' scores were 95 points higher. The grade point averages of the computer-based applicants were also higher.

"I don't know what implications this data may have, but it will be interesting to continue our research this area," said Ms. Hall.

Enrollment Services will continue to offer all three application processes to meet the needs of all potential Tech students. "I don't think any method is exclusive," explained Ms. Hall. "Our students come from about 950 high schools, so you can imagine the varying levels of technological access each potential student has. So, we'll continue to put our message out there as many different ways as possible."

Whistle Readers Talk Back

More than 200 Georgia Tech employees have "talked back" to *The Whistle* staff by filling out the 1996 Whistle Readers' Poll. Unfortunately that leaves 4,300 opinions untold and 8,600 missed opportunities to win a free meal at one of Atlanta's favorite eateries. Employees can still submit their completed survey

through October 31. Responses will be selected at random for various prizes, including a dinner for two at Mick's. Survey results will be used to guide the editorial and

design staff in their continued effort to meet the needs of the Georgia Tech faculty and staff. For more information, contact 894-8324 or whistle@www.gatech.edu.

New Vice Provost McMath Committed to Academic Quality

As a member of the

President's Cabinet,

McMath will be an

advocate for under-

undergraduate

students.

graduate studies and

Victor Rogers Communications

A s a history professor, a school chair, an associate dean, a student advisor and a member of dozens of task forces and committees, Dr. Robert McMath has helped mold Georgia Tech graduates for nearly 25 years. With his appointment to the newly created position of vice provost for Undergraduate Studies and Academic Affairs (VPUSAA), McMath will continue his role as an advocate for undergraduate education.

"McMath brings a strong interest in teaching and in students, and a wealth of knowledge about Georgia Tech to this new position," said Dr. Mike Thomas, provost and vice president of Academic Affairs. "He'll be a great asset in dealing with the additional issues placed on the agenda, such as assessment of degree pro-

grams, posttenure review, the availability of FutureNet into the

residence halls, and the new cable capability with 10 channels devoted to Georgia Tech. He has an innovative attitude that will ensure that Georgia Tech gets the most out of these new agenda items as we move forward."

Thomas said the position was expanded from a part-time position, formerly held by Dr. Catherine Ross, to its current complement of activities in order

to address the new agenda items, and to ensure a focus is maintained on educational activities for undergraduate students.

As VPUSAA, McMath will serve on the President's Cabinet and will report to Thomas. His responsibilities include coordinating undergraduate studies, including the core curriculum and incorporating technology into the undergraduate classroom; coordinating

academic programs with Student Affairs and Auxiliary Services; semester conversion; faculty appointment, reappointment, promotion, tenure, and posttenure review; academic program assessment; admissions and financial aid; co-operative education and transfer programs; and study abroad and international student services programs.

"This job involves everything from admissions to educational technology," McMath said. "I want to keep focused on asking the fundamental questions: What is it we want students to know and be able to do [upon graduating]? Secondly, what is there about the Georgia Tech experience, as it is now, that we value and would not want to lose? Also, how do we foster a spirit of community among faculty and students?" See McMath, page 3

Donbaugh Delivers Service

Amy Fraser Communications

Onbaugh point of the new faces on campus this fall is Chuck Donbaugh, Tech's new associate vice president for the Office of Human Resources. Donbaugh joined the Tech staff July 8.

"After visiting the campus and meeting with Tech faculty and staff I became even more impressed with the school I knew enjoyed a great academic reputation," said Donbaugh. "I was especially impressed with the focus Tech officials place on administrative excellence," he said.

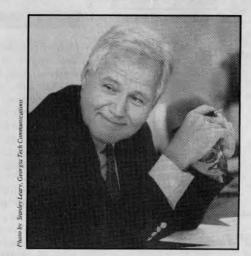

As AVP, Donbaugh will provide creative leadership in developing, implementing and administering Human Resource policies and practices that support the Institute's broader mission of teaching and research. "That needs to translate into sound business processes that make good sense to our customers (employees and students) and which support them in their own Georgia Tech endeavors," he said.

To accomplish this mission, Donbaugh said he will work through established campus mechanisms such as the System 2000 Advisory Committee, a task force focused on improving administrative and financial computing information systems, and the Administrative Excellence Task Force, a group committed to business process improvements. He also will create additional training programs that encourage and foster administrative excellence.

"The primary goal of all Tech administrative units is to provide outstanding customer service," explained Bob Thompson, senior vice president for Administration and Finance. "Chuck recognizes that this goal can only be achieved by our most important

resource—people—and the pivotal role he and his organization play in attracting and retaining the best people, and providing them with the training and tools they need to do their jobs," Thompson said. "I look forward to his leadership as we begin our efforts to improve processes and provide new systems for the campus community."

Prior to joining the Tech team, Donbaugh served 11

years at the University of Rochester, NY and 13 years at Penn State.

At Rochester, Donbaugh maximized institute resources by creating a training consortium that consolidated a variety of disjointed training initiatives. He also established a leadership institute to develop and reinforce leadership skills at all levels of the institution. In addition, he authored a comprehensive employee benefits plan that will serve Rochester employees into the 21st century.

His first Georgia Tech project is to assess specific OHR operations using the Business Process Re-engineering plan, a team-based improvement strategy initiated last spring. The initial focus will be on the classified hiring process.

Donbaugh's long-range objectives include improving the delivery of existing services and creating new services that address student and employee needs. Donbaugh said he is enthusiastic about his new

position and that he is impressed at the skill level and commitment to service evident in the Tech community. "I truly believe in the power of people," explained Donbaugh. "Good people can usually meet the challenge if given an unencumbered opportunity to do so."

Continual Calendar

Georgia Tech **Bookstore Trade** Department **Re-Opening Sale.** New and returning customers save 15 percent on all hardcover trade books, October 9-31. In addition to its core curriculum offerings, the bookstore features trade books on cooking, nature and gardening, and parenting. OFFICE OF INFORMATION TECHNOLOGY The Office of Information Technology (OIT) advises computer network users to make careful selections when choosing or changing passwords associated

Passwords are important because they are the way the computer verifies that person logging in to a account. The password is the key to other employees' private data, electronic mail, and important computer

OIT offers the following guidelines to help guard against improper/illegal password usage: · Make your password as long as possible. The longer it is, the more difficult it will be to decode. Always use at least six characters in your password. · Use as many different characters as possible when forming your password. Use numbers, punctuation characters and, when possible, mixed upper and lower-case letters.

that someone else is likely to be able to figure out. Obviously, things like your name, phone number, and address are to be avoided. Even names of acquaintances and the like should not be used.

ical names that are listed in standard dictionaries. Never use a password that is the same as your

you're typing them.

In addition, users should change their password every 30 days, avoiding the reuse of any previously selected password.

For more information about faculty/staff user accounts or passwords, stop by the Customer Support Center in the main lobby of the Rich Building or contact the OIT Customer Support Center at 894-7173.

OCTOBER8

The Executive Board Meeting, is scheduled from 1:00 - 3:00 p.m. in the Poole boardroom of the Wardlaw Center. For more information, contact Russ Heikes at 894-2331 or rheikes@isye.gatech.edu

SCAT, Georgia Tech's special crime prevention team, will meet at 2:00 p.m. in room 319 of the Student Center. For more information, contact carolyn@cc.gatech.edu

OCTOBER9

Georgia Tech Volleyball. The Yellow Jackets head to North Carolina for a 7:00 p.m. match. For more information, call the Athletic Association at 894-5400.

Robert Jordan, author of the "Fallon" series and the most recent novel, Crown of Swords, will be on hand at the Georgia Tech Bookstore between 4:00-5:00 p.m. for a special signont. For n mation, call the bookstore at 894-3818.

PEOPLE

GTWF

The Georgia Tech Women's Forum recently announced the recipients of the 13th GTWF scholarship competitions.

The 1996 Winners are: Elizabeth White, a doctoral student in textile chemistry; Trisha Anderson, chemical engineering; Tammy Burnes, industrial and systems engineering, and Nataki Osborne, Chemistry/HTS

The selections were based on financial need, academic achievement, and leadership. Each winner received a \$1,000 check, an award certificate and an engraved paperweight.

The GTWF program has assisted 36 students with more than \$36,000 in scholarships since 1984. The campus organization open to all Georgia Tech employees.

College of Computing (COC) Bill Ribarsky, senior research scientist at the Graphics Visualization and Usability Center has been named general co-chair of the Institute of Electrical and Electronic Engineers (IEEE) Visualization '96 conference, the leading international conference in scientific and information visualization.

Visualization '96 will take place in San Fransisco at the end of October. To find out more about the conference, visit <http://www.erc.msstate.edu/vis 96>.

FASET Eases Freshmen Fears

A pproximately 800 freshmen from throughout the state arrived on campus last week to get their first glimpse into student life at Georgia Tech. The incoming students toured the campus, registered for courses and mingled with Tech faculty, staff and students during the first of two '96 FASET orientations, September 25-27. A second session, catering to out-of-state students and parents is scheduled for October 3-5.

The Familiarization and Adaptation to the Surroundings and Environs of Tech (FASET) program is sponsored by the Division of Student Services. The three-day orientation program is designed to ease the fears of new students and their parents.

Other student FASET activities included workshops, small group discussions, social activities and a new segment called "It Could Happen." This 25-minute narrative, adapted and performed by members of the FASET Council, deals with student issues such as date rape, alcohol abuse and sexual identity issues.

"The idea behind 'It Could Happen' is to prompt students to think about various behaviors and situations they may encounter while at Tech," said Carol Heller, coordinator of Connect with Tech and assistant to the dean of students. "Collidascope," another issues-oriented session deals with topics ranging from sexism to racism to birth control.

Separating the students and parents allows both groups to be more comfortable when asking questions. It also teaches them to let go and accept changes in the parent-child relationship. While the students were attending their assigned sessions, parents and other family members were participating in a separate series of panels and presentations. Parents' FASET topics included housing, financial aid, academic support, and campus safety.

Peer leadership is also an important aspect of the FASET program. A total of 120 student leaders served as FASET leaders during the September session. FASET leaders are upperclass students who undergo two intensive training sessions and must pass a written test covering general knowledge about Georgia Tech. Each leader is paired with a small group of incoming students to ensure the students get personal attention.

The FASET leaders are guided by the FASET Council, a group of 12 former leaders who work year-round, serving as the FASET "staff." Students serving on the FASET Council design and implement the program, and select and train FASET leaders.

FASET costs \$95 for students and \$50 for parents. Although FASET attendance is not required for enrollment, about 94 percent of each incoming class participates. For more information, call 894-2691.

SPOTLIGHT

Meet Linda Brown

Full Name: Linda Brown

Age: 40

Occupation: administrative assistant II, Office of Information Technology/Resource Management

Current Projects: 1996-97 president of the Georgia Tech Women's Forum and a unit coordinator for the 1996-97 Statewide Charitable Campaign in OIT.

Years at Tech: 4 plus

Education: not enough

Marital Status: divorced

Children: 2 sons - Jason (16) and Adam (15); and 3 cats who think they're my children - Napoleon, Josephine, and Casey

Favorite Book: *The Bible* has to be my favorite book. It is full of fascinating stories and inspiration which helps my daily living.

Favorite Movie: "Wizard of Oz"

In my Spare Time I: enjoy cross-stitching, square dancing, and walking.

Few People Know I: wanted to be a chiropractor. I'm interested in medical alternatives.

Best Advice Ever Received: The best advice my father ever gave to me was to go to college before getting married after high school graduation. As I've gotten older, and maybe wiser, I wish that I had taken his advice.

Pet Peeve: Inconsiderate drivers—With the heavy traffic we have in Atlanta, many drivers think they're the only ones on the road.

Personal Hero or Heroine and Why: I have 3 people who are my heroes. First is my mother. She lived with cancer for 2 1/2 years before it finally took her life, and not once did I ever hear her complain about her illness. Second is my grandfather. He retired from the Marine Corp after 30 years of service. He was the most kind and gentle man that I have ever known. Third is my grandmother, Nanny. She is in her 80s and is more active that when she was younger. She's always there when I need her and she's my best friend.

When I Was Little I Wanted to Be: a school teacher. I was fascinated that teachers could write on the wall. (I was only 4 and didn't know it was a chalkboard!) My parents weren't too happy to see me drawing on my bedroom walls.

What is Your Most Important Achievement? raising my children

If You Could Do It All Over Again, What Would You Change? I would be more patient with my children.

McMath, continued from page 1

McMath acknowledges the job is multifaceted and will be challenging, but he sees teamwork and a clear mission as keys to success.

"I will work very closely with the dean of students and the [to-beappointed] vice president for Student Affairs," he said. "My principal job is to look for ways to integrate more closely a student's academic life with what happens during the rest of the day—ways to connect the inside of the classroom with the outside of the classroom because students learn in many different settings. Without intruding on what students do with their time, we need to find ways of making the entire Georgia Tech experience both pleasant and educational," he said. As a member of the President's Cabinet, McMath will be an advocate

for undergraduate studies and undergraduate students. "Undergraduate programs have been the mainstay of Georgia Tech since the beginning," he said. "I'm pleased President Clough and the administration is recognizing the importance of undergraduate programs by creating a position at the vice provost level to speak for the needs of undergraduate students and their programs."

At least every other week, McMath will meet with associate vice president for Auxiliary Services Rosalind Meyers and the new vice president for Student Affairs to ensure Tech provides students with the best possible activities and programs.

Of the many projects on McMath's desk, one of the most pressing is semester conversion. The Board of Regents requires all schools in the University System to operate on the semester system. Beginning fall quarter of 1999 Georgia Tech switches to semesters.

"Many people at Tech, including me, had some reservations about semester conversion," McMath said. "It is now a done deal, and our job is to figure out how to make it work. If all we do is the mathematical calculation to convert quarter hours into semester hours, then we really will have missed an opportunity to think broadly about what we want students to learn and to be able to do." In October a faculty committee will report on recommendations for the core curriculum.

The effect of semester conversion on the cooperative plan has been the subject of much discussion, and McMath is well aware of both sides.

"The co-op piece of this is one of the most difficult things to sort out," he said. "My job, as it relates to co-op, is to help the program successfully make the conversion without losing any part of what is clearly one of Georgia Tech's strongest programs."

McMath's new duties officially begin fall quarter. He will maintain his faculty position with the School of History, Technology and Society, and he will teach a special topics course called "Democracy in American Politics." Because of the requirements of his new administrative position, McMath said he will not teach as much as he would like. However, he hopes to teach a course each term. "Teaching is what L do " he said

"Teaching is what I do," he said.

New Program Gives Students the EDGE

S tudent Center Programs and the Georgia Tech Housing Department are currently seeking faculty and staff representatives to serve as mentors for "The Experiences designed to give you the Edge" program (GT EDGE). The program is aimed at helping students identify and prioritize their co-curricular needs.

Co-curricular activities are an important part of a student's overall development, explained Andrea Hoffer, associate program director, Student Center Programs, because they provide opportunities for growth and leadership beyond what is available in the classroom, she explained.

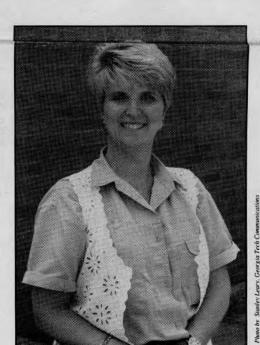

The program encourages freshmen to evaluate their educational and professional interests before getting involved in any organization or activity. "Many times freshmen get overwhelmed when trying to select co-curricular opportunities because they don't take the time to develop a co-curricular plan," said Hoffer. "Our program will help them avoid that frustration by developing a plan that aligns their co-curricular activities with academic endeavors."

The program will also enable students to document their co-curricular education by creating a co-curricular transcript. The transcript will include a summary of activities and explanation of the skills students developed through their involvement. Students will be encouraged to use the transcript in conjunction with their academic transcript and/or resume.

Mentors will play an integral part in the program by providing support and encouragement to participants while they are developing and implementing their co-curricular plan. Hoffer said she will work closely with the mentors to ensure they have the tools and resources they need to successfully support their assigned student. Interested parties are required to attend the GT EDGE orientation meeting Wednesday, October 16. The deadline to RSVP is October 11 at 5:00 pm.

In addition, GT EDGE will sponsor a monthly newsletter, highlighting various campus organizations and activities. A separate meeting concerning the newsletter is scheduled for October 10. Representatives from all campus organizations are invited.

For more information about the the GT EDGE program, contact Andrea Hoffer at 894 2805 or e-mail at ah84@prism.gatech.edu.
