Cruise Schedule Is Announced For Tech's NROTCS Midshipmen

By Bill Shepherd

Over 150 midshipmen enrolled in the TECH's NROTCS program will complete summer training cruises by September 27. It was announced recently. These cruises, of three to seven weeks duration, will take Tech men to such widely separated ports as Cherbourg, France; Guantanamo, Cuba; and(/

The purpose of the award is to

New students and departments have been established at Georgia Tech to meet the requirements of rapidly expanding southern industry. Further, more and more young engineers are being offered both on and off the campus.

Tech Student Killed

Morry Davis Kenson, a Mechanical Engineering Student of Lexington, Kentucky, was killed in an automobile accident on June 11, 1949, at Dalton, Georgia. He was returning to his home at the time of the accident.

The Trustees have decided to present him the degree of Bachelor of Mechanical Engineering Sophomore, class of 1949, posthumously. The degree was presented to his mother this week.

1. E. Institute Plans Giving Soph Award

At its regular winter business meeting on July 5, the Georgia Tech chapter of the American Institute of Industrial Engineers approved a plan to present an annual Junior Award to the outstanding industrial engineering sophomore. The purpose of the award is to promote interest in and to give recognition for outstanding scholastic achievement.

To be eligible for the award, LE-sophomores must be among the three men having the highest grade point averages in their class. From these three men, the chapter will select the man considered to be most outstanding.

The first award will be made on Honor's Day in 1950. The AIEE award is one of four student awards recently instituted in the School of Industrial Engineering.

Blake Van Leer Begins Sixth Year of Leadership

Attention Veterans

All veteran students under Pub-

lic Law 346 or Public Law 16 who plan to be graduated, transfer to

another school, withdraw from school, or go to work under the con-

tract system of the end of this

term, September 16, 1949, are

advised to inform the student

division office of their specific plans. After this date, the student division office will execute discontinuance forms.

2. Students to be graduated will fill out discontinuance forms.

3. Students transferring to another school or on a job-training contract will also fill out discontinuance forms.

Special tricks planned will be run off at the gates before game time each Saturday. These tricks will be given out with the flash cards at the beginning of the game.

The same cards will be used this year, but a 1% inch hole will be cut in the center of the card to allow section members to better align the cards.

Library—Our Paramount Need

We must not allow our top standing to be jeopardized.

Georgia Tech finds itself in such a serious need for new facilities that its standing as a leading engineering school may well be in jeopardy. It is our own studied opinion that progress in this field is a factor which would embody all of the improvements lacking in the current plant.

The necessity, which will cost one and one-half million, would provide reading and reference rooms for undergraduates, graduates, and faculty members. And therein lies the greatest need. The library becomes an increasingly important source of technical data as one progresses from the junior-senior level to the graduate division. We have one of the most extensive collections of technical pamphlets, books, and reports, according to the General Education Report, but the difficulty is in making it available to the student.

Public Opinion

Due to a serious shortage of available space, books are stored in every conceivable nook and cranny of the library with some types overflowing into the basement of Knowledge. Obviously, this is not an ideal situation from either the students’ viewpoint who must shuffle back and forth from building to building and from floor to floor who the librarian who must track down books much the same as a hunter pursues a fox.

Even as apparent as this need may seem, it has not proceeded for us a new building or even a new floor. We have a beautiful president’s home and an excellent textile building, but the library is offering but one small step toward the future. However, some measurable progress on the part of the administration is visible. After fluctuating in the doldrums of third and fourth priorities for three years, the building now occupies first place in the school’s list of building priorities in Dr. Van Leer’s annual report to the Board of Regents. This is most commendable.

Nevertheless, this fact is just the opening round, the laying of the cornerstone, since the most extensive collections of technical pamphlets, books, and reports are stored in every conceivable nook and cranny of the library. The library becomes an increasingly important source of technical data as one progresses from the junior-senior level to the graduate division. We have one of the most extensive collections of technical pamphlets, books, and reports, according to the General Education Report, but the difficulty is in making it available to the student.

ALABAMA’S KLAN PROBLEM

Auburn’s Plainman gives us a true view of the situation.

Columnist John Temple Graves recently appeared in an address to a citizens’ meeting in Birmingham:

“The Ku Klux Klan must be dissolved. The Klan has become a menace to the Negro race. Few of the victims have been able to stand up and protest against them. Several Negroes have been killed or maimed by the Klan. The Klan is the support of the student body. If you believe the situation has reached the stage of such a time, you are right.”

The Klan is not only an organization of white men, but also of Negroes. Its purpose is to suppress the Negro race. Few of the victims have been able to stand up and protest against them. Several Negroes have been killed or maimed by the Klan. The Klan is the support of the student body. If you believe the situation has reached the stage of such a time, you are right.

Miss Perfect Lips Will Be Selected by Co-ops

By Walt Miller

The officers of the Co-op Club announced that the annual Miss Perfect Lips contest is underway with full swing. All of the forty-six new Co-op-freshmen have their kiss cards and are busy soliciting kissprints of their favorite girls. It has been rumored that some of the rats are even sampling the merchandise.

Pertinent Information

At a recent meeting, the freshmen were given a minimum of five cards and were given two weeks to solicit the first kissprints. The cards also contain the pertinent information about the girls whose lips prints appear on the card. This information includes: name, address, PHONE, age, height, weight, color hair, and color eyes. It will, of course, only be used in selecting the winner.

These cards will be turned in to the Miss Perfect Lips Hall on August 15th which will be an open dance.

The officers of the club will select and announce the Miss Perfect Lips for 1949 at this dance. The winner will be presented with a prize, the exact nature of which is to be announced later.

230 Girls to Be Catalogued

This has always proven a favorite contest of Tech students, especially those freshmen who later have access to the file cards. This year there are forty-six freshmen participating in collecting the prints which means that over 230 girls will be filed and catalogued away for future reference. Of course, this file will be highly confidential and will be open only to the members who participated for use in research.

A. P. O. Meets

The first Alpha Phi Omega pledge meeting will be held this Monday night, July 16, at 8 P.M. in the A. P. O. Room. If you cannot attend the meeting and want to join Alpha Phi Omegas, contact Box N or Vice-President Ted Lachmann (Box 1906, room 124, Glenn dormitory).

IM Activities To Be Varied This Summer

The Tech Management Club opened its summer season of activities with the first business meeting of the quarter last Tuesday afternoon. President Lamar Jordan welcomed both the old and new members to the meeting.

Plans for the summer call for a tour of the Fisher Body Works division of General Motors which was held yesterday afternoon, a round table discussion on employment opportunities for Industrial Management students and a tercentenary tour of the Department of Commerce and Gordon Foods. In addition, it is hoped that an advertising speaker will be presented sometime in August.

The club is planning to be active socially as plans are now being formulated to hold a weekend outing at one of the nearby Georgia state parks.

All IM students above the sophomore level are invited to attend the next meeting of the club.

This organization is the Tech affiliate of the American Management Association, and the student members are entitled to all the publications and privileges of a senior AMA membership.

Graduate Club Holds Party at Venetian, Fifty Couples Attend

The Graduate Club of Ga. Tech held its first outing of the summer last Saturday afternoon at the Venetian Country Club, with over fifty couples enjoying a swimming party followed by a dinner and dance. The party's purpose was to welcome and introduce the new members of the club and to promote good fellowship and friendship among Tech's graduate student body.

Emerson Wins Rotary Award For Past Community Services

Mr. Emmer, President of the Georgia Institute of Technology, is the winner of the Armin Maier Award, presented each year to the Atlanta Rotarian who has performed the most outstanding service during the preceding year in the field of community service. The presentation was made at the June 21 meeting of the Tech Rotary Club, which meets on the third Tuesday of each month. Following are some of the accomplishments and activities of the award winner this year:

Mr. Emerson came into Rotary in 1932 and since then has contributed to a host of worthy causes for the good of his community. Among these activities have been service on the Board of the Family Workers Society, on the Community Planning Council of which he later served as president; Community Fund, Red Cross, and other campaigns for worthy projects in the community. He was a member of the Advisory Council on City Planning, and he is the only one in the Southeast ever to receive this award except Mr. Williams.
Seven Interviews Were Arranged
For Average '49 Tech Graduate

The average student graduating from the Georgia Institute of Technology during the year ending June 1949 was interviewed by at least seven companies for possible employment, it is indicated in a report just released by Associate Dean of Students Fred W. Ajax, school placement officer.

A total of 8,141 individual interviews were arranged between students and a number of interested companies. Placements resulting from these interviews were made without charge to student or company.

Out of 3,200 industrial and governmental agencies listed by the Georgia Tech placement office, more than ten percent of them sent representatives to the campus to interview students. About one-third of the listed companies, namely 1,000, are located in Georgia.

For the year ending June 1948, the placement office listed 2,122 positions filled by students planning to change their type of course for the Fall term starting Septem-ber 26, 1949 should come to the Coordinator of Veterans Affairs Office, Room 182 Knowles Building, for the official change of course papers. Since a change of course involves the approval of Georgia Tech and the Veterans Guidance Center, all veteran students planning to change their course papers now, so that there will be no difficulty at registra-tion time.

Fred W. Ajax, Coordinator of Veterans Affairs Office.
